

Sneaky Thief

Shinjuku Expansion

Revision 1

The **Sneaky Thief** expansion adds thief customers that cancel out a legitimate customer during scoring.

Components

- 8 Thief tokens - 2 for each type of good

Rules

Setup

Before the game starts, remove 8 regular customers at random (without looking at them) from the bag. These customers are removed from the game.

Add the 8 thief tokens to the bag of customers.

Gameplay

Thief customers act like any other customer and can only be given to a store (or department store) that matches the good that the thief wants.

Scoring

Before endgame scoring, each thief customer cancels out a matching regular customer. This must be done before removing the customer type that you have the most of.
